Lex-Aire Mobile HVLP Turbine Systems

LEX-AIRE Turbine systems are ideal for mobile businesses.

Lex-Aire equipment is the finest in the industry.

They are lightweight, quiet, and easy to set up.

The units present a professional, high-tech, appearance to your customers.

All you need is access to a 110 volt outlet.

The turbine provides an instant continuous air supply.

There is no need to wait for a compressor to build up pressure, nor is there the fluctuation in air pressure.

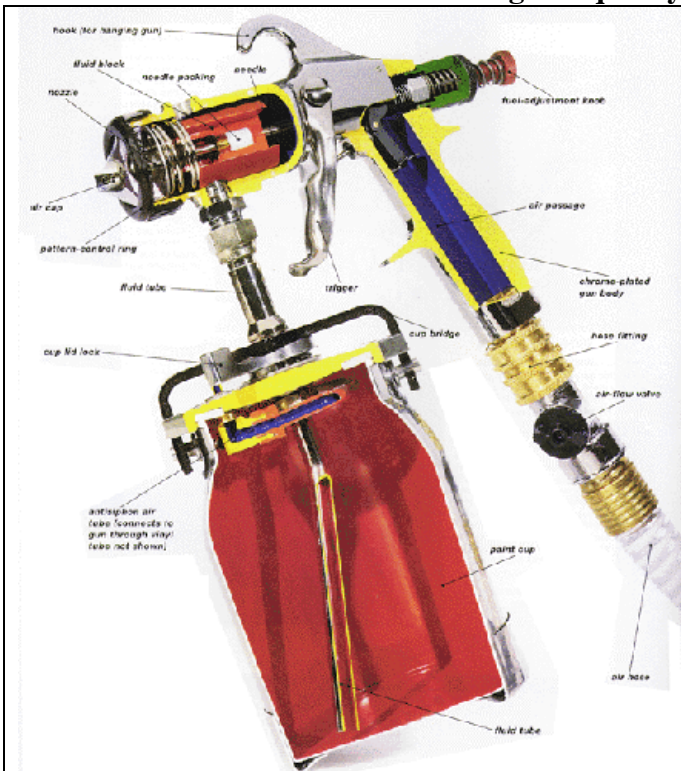

Lex-Aire Spray Systems are used by mobile professionals in providing on site automotive touch-ups, panel painting, interior repairs and wheel refinishing.

The high quality Pro-Series Gun provides an even finish, without mottling of base coats.

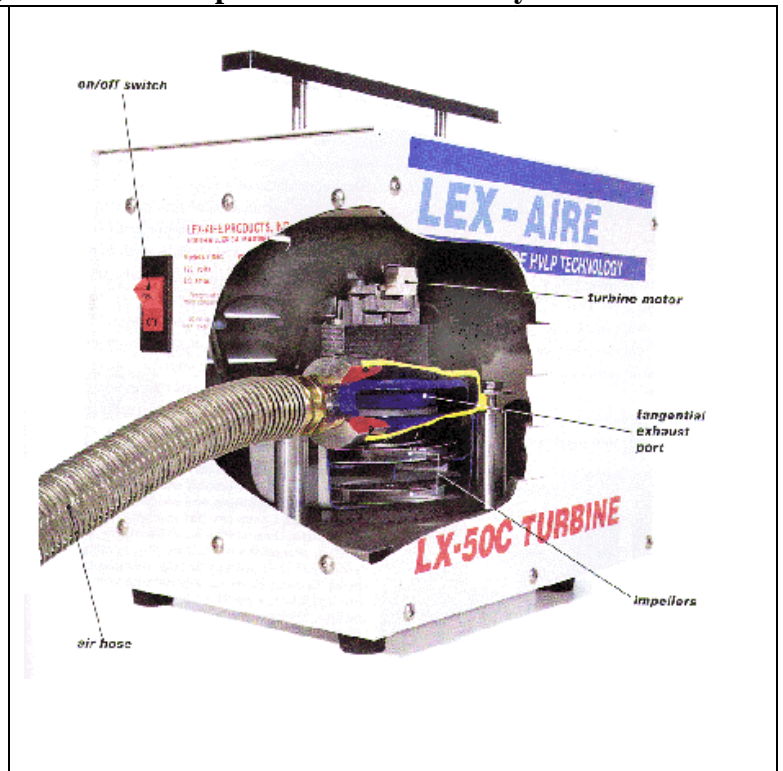

LEX-AIRE COMPACT SERIES TURBINES feature a heavy duty cabinet designed to stand up to years of professional use. The inside of the cabinet is acoustic foam lined for noise reduction. The motor mount forms a plenum chamber which isolates clean incoming air from the exhaust cooling air. All incoming air is drawn through a 3 micron washable main filter with 13 square feet of effective filter area that is 99.9% efficient. In addition the LX-60C also feature a washable foam pre-filter. This is the most advanced filtering system on the market for blemish free finishes and long motor life. Every Lex-Aire turbine system is packaged in a sturdy well designed shipping carton.

Lex-Aire meets all HVLP requirements. Three Ounce Cup available for EPA Rule.

LEX-AIRE has the highest quality, best made components in the industry.

See how simple the inside of the Spray Gun is.
